Description			
Creoled plante régulièrement sur Amon 2.4.0 ce qui semble provoquer des problèmes de VPN et d'ead sur les serveurs concernés

Est-il possible d'avoir les journaux se trouvant dans `/var/log/creoled.log` ?

Merci.

et encore une fois, VPN hs et EAD hs

#5 - 23/10/2015 17:29 - Emmanuel GARETTE

Je n'ai jamais constaté ce problème sur nos serveurs.

Est-ce que cela se produit encore ? Pourquoi le service serait-il redémarré en plein nuit ? Cela se passe au démarrage du serveur ?

Si on fait :

1. ifconfig lo down
2. creoled --debug

On a bien cette erreur :

```
"ChannelFailures: IOError("Port 8000 not bound on '127.0.0.1',")"
```

La question est de savoir à quel moment creoled démarre sans la présence de "lo".

#6 - 26/10/2015 10:58 - Olivier FEBWIN

non, ça ne se produit plus

#7 - 26/10/2015 11:09 - Olivier FEBWIN

Ne serais-ce pas en relation avec <http://eole.orion.education.fr/listes/arc/amon-sphynx/2015-09/msg00027.html> ?

Est-il possible d'avoir des informations ?

Le serveur s'est-il mis à jour cette nuit ?

Le serveur a-t'il redémarré ?

Les logs de creoled sont-ils pertinents ?

à priori ça à l'heure de la dernière mise à jour

Ce bug est toujours présent en 2.4.2
Cela fait suite à une mise à jour : creold plante, puis le VPN, puis ead-server et ead-web
C'est très pénalisant !

#18 - 13/03/2017 11:24 - Olivier FEBWIN

Le problème est également présent en 2.5.2
