Fixes #1491
Fixes #1483
Fixes #1305
Fixes #1429

Automatic Athena event handler registration is fixed for all supported browsers and is no longer document-sensitive (ie, it works inside tables now). Handler tags are processed server-side when templates are loaded and rewritten to the appropriate HTML before being served. Note that this means that only documents which run through the document preprocessing mechanism will be able to use the handler tag (so use docFactory!).

The XPath-specific implementation of node discovery in Athena's JavaScript runtime module has been refactored, simplified, and now has well-defined (and unit tested) error behavior.

Nit has gained a new assertion method, assertIn. Factoring of test collection has also been improved, separating _TestMethod creation from discovery of the names of the defined test methods.

The JavaScript classes which implement Mantissa's ScrollTable have been further refactored, documented, and generally cleaned up. There is now an API for removing rows, several existing asynchronous APIs now return Deferreds, and test coverage has been further improved.

Quotient's inbox has been changed to use <athena:handler> in numerous places to improve error handling. Many APIs have been changed to separate DOM concerns from model concerns.

On the server side, the Quotient inbox no longer maintains state to track what message the browser is currently displaying. All action methods now take an argument specifying what message or group of messages to act on, removing the possibility of the server acting on a message other than the one which the client intended.

Much model logic has been factored out of the display classes which implement the inbox. Overall documentation and test coverage has also been improved.

Revision 588a7ed1 - 02/27/2012 02:52 PM - Lionel Morin

Rend les liens cliquables dans les commentaires (fixes #1272)

Revision 517b70d7 - 03/15/2012 03:37 PM - Lionel Morin

Rend les liens cliquables dans les commentaires (fixes #1272)
