Merge signup-realname-2277-2

Author: exarkun, pjd  
Reviewer: moea  
Fixes #2277

Reintroduce the Spidermonkey Athena Runtime so that the various node lookup methods provided by the runtime are available to the unit tests. Factor the xpath-specific implementations down into a base class shared between the different xpath-supporting browsers.

Add some minor test coverage for the Mantissa needsSecure feature for negotiating up to HTTPS from HTTP.

Change the Mantissa UserInfoSignup mechanism to only present a single field for name information, instead of a separate field for each of first and last name. Change the UserInfo item created by that signup mechanism to only have one attribute to store the name information. Change the user creation API associated with these objects to only have a single name parameter. Change the Mantissa Organizer and other code which used the UserInfo item and the user creation API to reflect these changes.

#### Historique

##### #1 - 20/10/2011 16:59 - Gérald Schwartzmann

- Version cible mis à CDC version 0.8

**#2 - 22/11/2011 14:38 - Gérald Schwartzmann**
