Update of minion can cause troubles on join and Veyon installation

The update of Saltstack minion configuration will reload the minion and can conflict with other states during initial installation.

- saltstack/salt/top.sls: manage minion as last state.

J'ai fait un test manuel ce matin et cela fonctionne, voici un résumé des logs vu par `salt-run state.event pretty=True` :

étape	timestamp UTC
acceptation de la clef	2021-01-05T08:37:59.620057
authentification du minion	2021-01-05T08:38:03.956026

mise à jour du cache du minion	2021-01-05T08:38:11.520348
redémarrage du poste sans log (le minion se fait couper la chique par le redémarrage à la suite de l'intégration)	
authentification du minion	2021-01-05T08:40:32.546272
mise à jour du cache du minion	2021-01-05T08:40:33.717006

retour de <b>state.highstate</b>	2021-01-05T08:41:18.863294

Il semble que la pause de 600 secondes peut-être un peu courte entre l'acceptation de la clef et le **test.ping**, ou alors attendre 600 secondes et faire plusieurs tentative séparées de 30 secondes.

Il existe aussi la commande pour le master **salt-run --output yaml managed.alive** qui retourne la liste des minions authentifiés :

```
root@scribe:~# salt-run --output yaml manage.alived
- PC-477512.dompedago.etbl.lan
```

**NB** : le minion est redémarré à **08:41:15.309843 UTC** du fait d'un changement dans les fichiers de configuration (les retours à la ligne).
