

Distribution EOLE - T che #31860

Sc nario # 31671 (Termin  (Sprint)): Eolelisation du MITM "client" sur tous les modules EOLE

Installer l'autorit  de certification du proxy lors du reconfigure

09/03/2021 14:13 - Daniel Dehennin

Statut:	Ferm�	D�but:	09/03/2021
Priorit�:	Normal	Ech�ance:	
Assign� �:	Emmanuel GARETTE	% r�alis�:	100%
Version cible:	Prestation Cadoles MEN 08-10	Temps estim�:	0.00 heure
		Temps pass�:	0.00 heure
Description			
Actuellement, seul Query-Auto ou Maj-Auto mettent en place l'autorit� de certification par un script pre :			
<pre>root@scribe:~# Query-Auto -D Mise � jour le mardi 09 mars 2021 13:57:13 Ex�cution des scripts /usr/share/eole/majauto_pre run-parts: executing /usr/share/eole/majauto_pre/mitm Updating certificates in /etc/ssl/certs... rehash: warning: skipping duplicate certificate in eole.pem rehash: warning: skipping duplicate certificate in ISRG_Root_X1.pem rehash: warning: skipping duplicate certificate in ca.crt rehash: warning: skipping duplicate certificate in ca_local.crt 5 added, 0 removed; done. Running hooks in /etc/ca-certificates/update.d... Replacing debian:antsv3racine.pem Replacing debian:igca.pem Replacing debian:ca_proxy.pem Replacing debian:antsv3racine.pem Replacing debian:igca.pem done. done. [...]</pre>			
L'activation des variables et le reconfigure devrait suffire, des fois qu'un script postservice ait besoin de faire des requ�tes externes.			
Je propose d'installer l'autorit� de certification t�t en postservice .

telecharge le certificat MITM pendant reconfigure (ref #31860)

Historique

#1 - 09/03/2021 17:49 - Emmanuel GARETTE

- Statut chang  de Nouveau   R solu
- Assign    mis   Emmanuel GARETTE
- % r alis  chang  de 0   100

#2 - 10/03/2021 09:53 - Daniel Dehennin

- Statut changé de Résolu à Fermé
- Restant à faire (heures) mis à 0.0

Le certificat est bien mis en place dès le reconfigure :

```
run-parts: executing /usr/share/eole/postservice/00-eole-common reconfigure
Updating certificates in /etc/ssl/certs...
rehash: warning: skipping duplicate certificate in eole.pem
rehash: warning: skipping duplicate certificate in ISRG_Root_X1.pem
rehash: warning: skipping duplicate certificate in ca.crt
rehash: warning: skipping duplicate certificate in ca_local.crt
5 added, 0 removed; done.
Running hooks in /etc/ca-certificates/update.d...

Replacing debian:antsv3racine.pem
Replacing debian:igca.pem
Replacing debian:ca_proxy.pem
Replacing debian:antsv3racine.pem
Replacing debian:igca.pem
done.
done.
```
