Description			

Historique

#1 - 12/11/2024 11:37 - Emmanuel GARETTE

1er problème dans le code j'ai :

```
if vmVersionMajeur < "2.8.0":
    password_admin= "eole"
else:
    password_admin= "Eole12345!"
```

Le problème c'est que " **2.1** 0.0" est inférieur à " **2.8**.0". Il va falloir trouver un moyen robuste de comparaison de version.

L'authentification sur le service SSO n'est pas fonctionnel

Nouveau problème, une fois sur deux le test est OK.

Lorsque le serveur est en erreur j'ai deux erreurs dans les logs :
