Chose intéressante, cela ne se produit que via gen_config :

```
>>> from creole.loader import creole_loader
>>> conf = creole_loader()
>>> conf.cfgimpl_get_settings().read_write()
>>> conf.creole.services.activer_smartmontools = 'oui'
>>> conf.creole.smartmontools.smartmontools_devs_attrs_fail_ignore = [190]
>>> conf.creole.smartmontools.smartmontools_devs_attrs_fail_ignore.append(192)
>>> conf.creole.smartmontools
[smartmontools_devs]
smartmontools_mail = non
[...]
smartmontools_devs_attrs_fail_ignore = [190, 192]
[...]
>>> conf.creole.smartmontools.smartmontools_devs_attrs_fail_ignore = ['a']
