Au lancement de gen_config tout va bien mais quand j'importe "scribe23.eol" de <http://dev-eole.ac-dijon.fr/issues/7236>
J'ai le Warning :

```
root@scribe:~# gen_config
```

```
(uzbl-core:13105): Gtk-WARNING **: Could not find the icon 'gtk-file'. The 'hicolor' theme was not found either, perhaps you need to install it.

Aucun Warning avec Chromium.

Par contre avec :

```
gen_config_uzbl
```

Toujours des warnings à l'import d'un fichier avec message d'erreur.

Je suppose que le warning est du à la fenêtre affichant l'erreur.

Il faut donc tester en faisant exprès de générer une erreur, puisqu'une erreur dans gen_config ne devrait pas générer de warning sur la console.

```
root@scribe:~# gen_config_uzbl
```

```
(uzbl-core:3123): Gtk-WARNING **: Could not find the icon 'gtk-file'. The 'hicolor' theme was not found either, perhaps you need to install it. You can get a copy from: http://icon-theme.freedesktop.org/releases

La version uzbl est amenée à être supprimée. Le bug ne sera donc plus d'actualité.
